## Mission Statement

"**Our Mission** is to design and build the most innovative and advanced firefighting systems in the world. We are dedicated to providing a high quality, reliable product in an economical manner while constantly striving to incorporate proven technological advances into firefighting equipment."

**How to read SNUFFER Model Numbers:** The first four digits in a Snuffer model number refer to the maximum gallons (US) per minute (g.p.m.) of water that the model is rated for. The last three digits refer to the cubic feet per minute (c.f.m.) of air that the unit is rated for. The first four digits in "Upgrade" model numbers are "0000." These units **do not** have water pumps; they are added to trucks with existing pumps.
