Dear Tony:

I am writing you regarding our Snuffer Unit. We have used this unit at several fire calls mostly grass, brush, and woods fires and have found it to be a very effective and efficient piece of fire fighting equipment. We recently had an opportunity to use the Snuffer Unit at a fire call where the structure was totally engulfed when we arrived. We were unable to enter the basement area where a leaking fuel tank was the cause of the fire. Through a small basement window we were able to use the snuffer line and extinguished the fire in less than a minute. The upper level of the structure was also a blaze and we used the CAFS foam line to paint the foam on the walls which extinguished the fire quickly. The Mutual Aid Fire Department that we responded to took the CAFS line and extinguished the rest of the fire in the structure. Needless to say both of our Fire Departments were very impressed with the fire fighting abilities of this unit. The Snuffer CAFS unit is now our first response unit for fire calls and the more we use it and train with it the more we realize the great potential and value that this unit has. Many Fire Departments have been to our station to view our unit and show interest in the Snuffer Unit.

Sincerely,  
  
Donald Parks,  
Deputy Chief/Superintendent  
Lunenburg Fire Department
